

Name _____

Date _____

There are some shape names which rely on how many sides and angles they have. It is useful to learn these.

triangle	- 3 angles
quadrilateral	- 4 sides
pentagon	- 5 sides
hexagon	- 6 sides
septagon	- 7 sides
octagon	- 8 sides
nonagon	- 9 sides
decagon	- 10 sides

Shapes can be regular – which means all the sides are equal and all the angles are equal.

Irregular shapes – sides are different lengths and the angles are different sizes.

1 Write each figure's name and whether it is regular or irregular.

a

b

c

d

e

f

2 Draw:

a a regular quadrilateral

b an irregular octagon

c a regular hexagon
